Interior painting and carpeting of call centers, reception area, hallways, and offices. Demo and new wall construction Electrical and cabling upgrades

**Project Duration**

Five Months

**Project Overview**

GLS provides managed network services that help customers by improving their IT performance. GLS is open 24/7, so RSI had to complete the work after hours and on weekends. RSI was contracted to provide the design specifications and the turn-key construction management to complete the required work. The project included painting of several office walls, reception area, demo of an office wall, carpeting of the call centers, hallways, and other offices. New cabling and electrical work had to be installed where the new workstations were installed. The project was completed on schedule.
