55,000 Sq Ft

Features

- Move of Hazardous Materials
- Move of Work in Progress
- Decommissioning
- Removal of the fire suppression system
- Teardown and installation of the Mezzanine

Project Overview

Rolls Wood Group is a joint venture between The Wood Group and Rolls Royce Aircraft. This project involves the relocation of the joint ventures' jet turbine rebuilt and maintenance facility from San Francisco to Houston. The facility services turbines from both private industry and the military. This move was a very industrial based move and involved over \$11,000,000 of aircraft engines and parts in various stages of rebuild. The facility encompassed 55,000 sq. ft. of space and with the excessive travel distance between sites the move took over 6 weeks to execute.

Project Duration

July 2008 to February 2009
